## DETAILED ACTION

### *Generally*

The restriction requirement of Paper No. 4, sent 27 July 2002 is hereby withdrawn.

Upon further inspection, examiner has found more variation than originally assumed. As examiner does not wish to perform a lesser quality examination than the applicant is entitled to, the following restrictions shall apply:

### *Election/Restrictions*

Claim 1, forming an insulating film by a plasma process, is generic to a plurality of disclosed patentably distinct species comprising: Species I: claims 1-12, controlling a thickness and temperature of an insulating film, Species II: claims 13-14, forming photoresist on a substrate, removing said photoresist and recovering a thickness of said insulating film; Species III: claims 15-17, forming a semiconductor film on a semiconductor substrate and forming an insulating film on said semiconductor film; Species IV: claims 18-20, forming a gate electrode on insulator film, patterning a gate electrode on said insulator film, oxidizing etching residues of said semiconductor film remaining on said exposed insulating film; Species V: claims 21-24, successfully depositing a first insulating film and a conducting film at least including a metal on a semiconductor substrate, patterning the layers to form a gate electrode, and forming a second insulating film on at least an exposed portion of said semiconductor substrate;

Art Unit: 2823

Species VI: claims 25-27, forming gate electrodes from a semiconductor film including impurities with a gate insulating film sandwiched there between form, forming a coat insulating film on said semiconductor substrate and exposed portions of said first and second gate electrodes; Species VII: claims 28-30, successfully depositing a pad oxide film and a masking nitride film on a semiconductor substrate, forming an opening in the mask, forming a trench in said substrate, forming a rounding insulating film, forming a trench isolation region by filling said trench with an insulating film. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2823

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
